## Measuring Circles

Choose a circular object and write it in the first column. Use a ruler to measure the diameter as carefully as you can. Use the string and a ruler to measure the circumference and record both measurements in the table. Then bring your table to the front to enter your measurements. If you have time measure some more circular objects. Measure to the nearest millimetre.

| Object | Diameter (cm) | Circumference <br> $(\mathrm{cm})$ |
| :--- | :--- | :--- |
|  |  |  |
